EDUCATION

University of British Columbia

B.Sc. Computer Science – GPA: 3.95

May 2028 (Expected)

Vancouver, BC

EXPERIENCE

Squarepoint Capital

Software Engineer Intern – Data Development

May 2026 – Aug 2026

Montreal, QC

- Built a dashboard to aggregate health/performance check results across **1100+** alphas for trade monitoring/monetization.
- Designed a YAML-database sync mechanism enabling **50+** desks to version-control dashboard configurations through GitLab.
- Built a polling scheduler that collects strategies and snapshots ~ **20k** relevant alpha metrics from a time-series database.
- Implemented event-driven alert system notifying **120+** managers of stale submissions across **47k+** quant research artifacts.
- Cut p95 API latency by **22%** by merging an Apollo subgraph with downstream gRPC services across **35+** prod endpoints.

Planview

Software Engineer Intern – Planview Copilot

Jan 2025 – Aug 2025

Vancouver, BC

- Reduced chat response latency by **50%+** by implementing concurrent tool calls to AWS Lambdas in Java-based chat service.
- Unblocked a major product release for **2k+** users by implementing a dual-token handler during an auth service migration.
- Implemented a log obfuscator/forwarder that routed **21k+** sanitized daily logs to Datadog, retaining raw logs in CloudWatch.
- Delivered a self-service RAG platform for **100+** tenants with S3 and Bedrock, enabling document uploads and analysis/Q&A.
- Built a hybrid tool-calling/MCP chat service and registry to support existing tools while integrating newer MCP servers.

UBC Department of Computer Science

Undergraduate Teaching Assistant – CPSC 210 (Introduction to Object Oriented Programming)

Sep 2024 – Dec 2024

Vancouver, BC

- Taught OOP/OOD, design patterns, and TDD with JUnit to **300+** students; mentored **25+** students in weekly labs/office hours.

APL Zuellig Pharma

Software Engineer Intern – Distribution Resource Planning

Oct 2021 – Jan 2022

Remote, Indonesia

- Replaced a complex Excel workflow for stock/distribution planning with a Python GUI across **46k+** SKUs in **25** warehouses.

EXTRACURRICULARS

Databricks

Student Fellow

June 2026 – Present

Remote

- **1 of 36** selected from **5k+** globally to represent Databricks campus/user groups, with mentorship from Databricks engineers.

PROJECTS

Extreme Vocals Classifier | Python, PyTorch, Numpy, Scipy, Librosa, Google Colab

- Synthesized a **500+** extreme vocal sample dataset by isolating vocals with Demucs, extracting and processing relevant vocal regions with Numpy/Scipy (RMS normalization, high-pass filter), and augmenting vocals with librosa from **57+** songs.

Membership Portal | React, TypeScript, PostgreSQL, Stripe, Supabase, Google Cloud Platform

- Built payment systems, onboarding/registrations, and email notifications; supporting **250+ MAU** and **\$5k+** revenue growth.

Serverless Link Tracker | Python, Google Cloud Functions, Firestore

- Built a serverless link redirector and companion CLI to track clicks with per-link metadata and async webhook notifications.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, HTML, CSS, SQL, C, C++

Frameworks: React, Spring (Boot), Next.js, Express, Flask, FastAPI, JUnit, Jest

Technologies: AWS, GCP, Supabase, PostgreSQL, Docker, Kubernetes, ArgoCD, Liquibase/Alembic, GraphQL, gRPC

Tools: Git, Postman/Insomnia, Datadog, Elastic Search, Jupyter, DBeaver, Vim, Figma, Jira, IntelliJ, Claude Code
